

GCP

<p>GCP Solution</p> <p>It is the opportunity to refinance your margin debt to remove the possibility of an unexpected call using a Stock Loan</p> <p>We can facilitate a loan of up to 85% of the market value of your total portfolio that you can use to pay off your margin balance while you retain the difference. Because most GCP loans are non-callable there is no need to worry about having your loan called if your equity declines. In this structure, you are taking a loan against the un-margined portion of your portfolio, using the proceeds to release the margin, then (at your discretion) placing the entire portfolio - newly freed of any restrictions - up for your limited-recourse financing - with no future margin calls going forward.</p>	<p>Example:</p> <p>You own \$1,000,000 worth of ABC stock and have a \$500,000 margin balance. Your goal is an 85% Premier securities loan.</p> <p>\$500,000 will be available to your current brokerage to pay off your debt; and the rest will be in the form of \$350,000 - in a limited recourse stock loan.</p> <p>Note that if approved, the exchange is handled simultaneously with the securities firm holding the shares through the DVP (delivery-vs.-payment) procedure for instant crediting and processing.</p> <p>Have other problems or challenges?
