

**For Immediate Release:**

**Our Subsidiary- New Vision Global Capital Partners LLC announced Institutional securities-backed restricted stock loan program today. Allowing clients to tap up to 50% liquidity of their concentrated positions of 144 stocks.**

January 25<sup>th</sup>, 2010- New Vision GCP- A Melbourne-based Consulting firm today announced their **Restricted** Stock Loan program along with their **Mutual fund** backed financing programs. All financing programs have Libor plus floating monthly based interest rate, and management by a major U.S. SIPC-member firm.

New Vision GCP is a financial firm offering limited recourse non-hedge-fund consumer stock loan. It offers a range of feature-rich loan programs exclusive to its private U.S. and overseas clients. New Vision GCP is dedicating all their efforts into two exclusive financing programs. These two products have been many years in the making and were developed in response to many past client request. This type of financing products was unavailable in the past.

Officers of New York and NASDAQ stock exchange companies have very large concentrated positions in their 144 stock and this will enable them to take some liquidity out of their position to reinvest into other investments such as Real Estate, Energy, Education cost, Business acquisition, or to diversify their concentrated securities position.

Banks have been slow to recovery and are not lending as aggressive as they have in the past. With our programs not only publicly traded companies and officers can borrow against their positions we also loan to top 500 private companies and investors in Mutual funds as well. No personal financials are required so top executives can borrow without leaving footprints in the market place and borrow with complete financial privacy says David Arnoff a managing member.

New Vision GCP managing member Mike Schnetzler added you keep your investment strategy on track. With our products you can leverage your assets for funds you need rather than deplete cash reserves or disrupt your investment strategy by selling assets, and there is no need for you to transfer assets into a separate collateral account.

Investors can access cash by drawing on a line of credit and receive via checks or Fed wire. One of the many features that make this a attractive tool for investors is the fact that they have access needed to liquidity with no personal financials and no personal recourse. If your stock experiences a down turn and you have a call you can walk away from the loan with no personal liability. The lender only looks at the collateral to repay the debt with no liability to you.
